**₹2,00,000** investment for 5% equity

Software Company • Chennai, India

ERP • POS • Digital Signage & CMS • Online Shopping

Prepared by Grovit AI

# 1. Executive Summary

Grovit AI is a software company focused on developing practical and scalable technology solutions for businesses.

Our current product portfolio includes ERP Software, POS Software, Digital Signage & CMS, and Online Shopping / E-commerce Solutions.

Grovit AI has already developed products and started working with customers, including Lelaban and a CMS advertising company. We are now looking for a strategic business partner to help expand our customer base, strengthen business operations, improve customer support, and enter new markets.

To support this expansion, Grovit AI is seeking a **total partnership contribution of ₹5,00,000**. This includes **₹3,00,000 towards app fees for one year** and **₹2,00,000 as the investment for 5% equity in Grovit AI**. The ₹5,00,000 total therefore covers both the one-year app fees and the equity investment. The proposed partnership also includes one year of software support at no additional software-support cost, subject to the agreed scope and terms.

Our primary growth targets are 100 projects within Year 1 and 500 projects within 3 years.

# 2. About Grovit AI

Grovit AI was established with the vision of building technology that makes business operations simpler, more efficient, and more connected.

Rather than focusing on a single software product, Grovit AI is developing a portfolio of business solutions that can address different operational requirements.

Our vision is to create an integrated business technology ecosystem covering:

Business Management → Sales → POS → Digital Advertising → Online Shopping

# 3. Products & Services

| Product | Description |
|---|---|
| ERP Software | A centralized business management platform supporting areas such as sales, inventory, customer management, reporting, operations, and administration. |
| POS Software | A solution for sales, billing, transactions, product management, customer information, and business reporting. |
| Digital Signage & CMS | A platform for businesses and advertising companies to centrally manage digital content across screens. |
| Online Shopping / E-commerce | Solutions that allow businesses to establish and manage digital sales channels. |

# 4. Proposed Partnership

**Total Partnership Contribution: ₹5,00,000**

| Component | Amount & Coverage |
|---|---|
| One-Year App Fees | ₹3,00,000 - covers app fees for one year |
| Equity Investment | ₹2,00,000 - investment for 5% ownership in Grovit AI |
| Total Partnership Contribution | ₹5,00,000 - includes one-year app fees and equity investment |

**Equity:** 5% ownership in Grovit AI against the ₹2,00,000 investment component. The ₹3,00,000 app-fee component is included in the ₹5,00,000 total contribution.

**Partner Contribution:** Business support, customer support, business development, customer acquisition, market expansion, and strategic business relationships.

The detailed responsibilities, rights, and obligations of the partner will be defined through a formal legal agreement.

# 5. Partner Benefits

## 5% Equity

The partner will receive a 5% ownership stake in Grovit AI against the ₹2,00,000 investment component, subject to the final legal and shareholder agreement.

## One Year of App Fees Covered

The total ₹5,00,000 partnership contribution includes ₹3,00,000 towards app fees for one year, subject to the agreed scope and terms.

## One Year Software Support

The partner will receive one year of software support at no additional software-support cost, subject to the agreed scope of support.

## Participation in Future Growth

The partner will participate as an equity holder in the future growth and development of Grovit AI.

# 6. Business Expansion Strategy

## Direct Sales

Build a dedicated sales process to approach businesses that require ERP, POS, Digital Signage, and E-commerce.

## Business Partnerships

Develop partnerships with advertising companies, business consultants, technology companies, local business networks, and industry partners.

## Recurring Revenue

Develop subscription-based software packages and support plans to create predictable recurring revenue.

## Cross-Selling

Sell multiple products to the same customer - for example: ERP → POS → Digital Signage → Online Shopping.

## 7. One-Year Growth Target

**100 PROJECTS**

To achieve this, the company will focus on increasing sales activities, building customer relationships, developing partnerships, improving product quality, strengthening customer support, expanding the sales network, and increasing brand awareness.

## 8. Three-Year Growth Target

**500 PROJECTS**

Over the next three years, Grovit AI aims to expand beyond its current Chennai market and establish a larger customer base.

- ERP solutions
- POS solutions
- Digital signage
- E-commerce
- Subscription software
- Business partnerships
- Customer referrals
- Geographic expansion

## 9. Revenue Growth Opportunity

Grovit AI has multiple potential revenue streams rather than depending on one product.

| Product | Potential Revenue Sources |
|---|---|
| ERP | Software implementation; subscription; support and maintenance |
| POS | Software subscription; implementation; support |
| Digital Signage | Monthly/yearly subscription per screen; CMS subscription; enterprise packages |
| Online Shopping | Platform setup; subscription; maintenance; additional services |

## 10. Competitive Growth Advantage

Grovit AI's approach is based on offering multiple business solutions under one technology ecosystem.

Instead of a customer needing separate vendors for different requirements, Grovit AI aims to provide multiple solutions through one company.

Grovit ERP → Grovit POS → Grovit Digital Signage → Grovit Online Shopping

This creates opportunities for long-term customer relationships and cross-selling.

# 11. Three-Year Vision

Our long-term vision is to establish Grovit AI as a scalable software company serving businesses through an integrated technology ecosystem.

**Target: 500 Projects in 3 Years**

We aim to build a company with a strong customer base, multiple recurring revenue streams, scalable software platforms, strong business partnerships, dedicated sales and support operations, and expansion into multiple markets.

# 12. Partnership Summary

| Particular | Proposal |
|---|---|
| Company | Grovit AI |
| Industry | Software / Technology |
| Location | Chennai, India |
| Current Products | ERP, POS, Digital Signage, E-commerce |
| Total Partnership Contribution | ₹5,00,000 (includes app fees for one year) |
| One-Year App Fees | ₹3,00,000 - included in the total contribution |
| Equity Investment | ₹2,00,000 - investment for 5% equity |
| Equity Offered | 5% |
| Partner Role | Business & Support |
| Software Support | 1 Year, subject to agreed scope |
| Year 1 Target | 100 Projects |
| Year 3 Target | 500 Projects |

## 13. Partnership Vision & Closing Statement

We are not looking for a partner solely as a source of capital. We are looking for someone who can become part of Grovit AI's growth journey.

The partnership will be based on: Investment + Business Support + Customer Network + Growth

With the right partnership, Grovit AI aims to accelerate customer acquisition, strengthen its products and support operations, expand into new markets, and build a sustainable software business.

Grovit AI has reached an important stage where our focus is shifting from product development toward business expansion and customer acquisition. With our existing products, initial customers, technology team, and expansion strategy, we aim to build Grovit AI into a larger software solutions company.

We are seeking a strategic partner who can contribute a **total of ₹5,00,000** and actively support the company's expansion. This total includes **₹3,00,000 for one year of app fees** and **₹2,00,000 as the investment for 5% equity in Grovit AI**. One year of software support is also included at no additional software-support cost under the agreed terms.
